

Movie Recommendation System

Recommender System is a system that seeks to predict or filter preferences according to the users choices. Recommender systems are utilized in a variety of areas including movies, news, books, research articles, search queries, social tags, and product in general. Recommender systems produce a list of recommendations in any of the two ways.

Collaborative filtering Collaborative filtering approaches build a model from the users past behavior as well as similar decisions made by other users. This model is then used to predict items that users may have an interest in.

Content-based filtering Content-based filtering approaches use a series of discrete characteristics of an item in order to recommend additional items with similar properties. Content-based filtering methods are totally based on a description of the item and a profile of the users preference. Let's develop a basic recommendation system using Python and Pandas.
